

It rained right after my treatment:

Rain and its effects on your applications: Moisture provided by rain will actually improve the performance of the fertilizer and many of the control products we apply. That is why we recommend watering your lawn if it does not rain within a few days of an application. In the event of a heavy rainfall immediately after an application that includes weed control, wait 10-14 days for treatment effects to become visible on the weeds. Our herbicides generally need 3 hours before irrigation. If weeds do not respond to our treatment, please notify us to schedule a free service call to resolve the problem.

Free service calls are a part of our commitment to customers scheduled to receive the full program. If you ever have a question about your lawn's condition, or should a problem arise between scheduled visits, please don't hesitate to give us a call. 321-704-0434 772-538-
